All structures are covered under our 7 year Top-to-Bottom Warranty!

When you purchase a structure from WOOD-TEX PRODUCTS you can be assured it was designed and constructed with the high standard of workmanship and quality consistent with our company and values. Your satisfaction is our first and highest goal and WOOD-TEX is pleased to make these promises to you:

WOOD-TEX commits to:

- Delivering your structure free of defects.
- A 7 year limited warranty covering all materials and parts from the very base of the floor to the last shingle on the roof.
- A Lifetime warranty on all hardware, this includes windows, hinges, latches and partition grills.

For our full warranty including terms and conditions, please see our website, www.woodtex.com.

Delivery Preparation

The BEST & easiest way to level a site is to have a base of #2 crushed stone 4 to 6 inches deep leveled and tamped. This allows for good drainage underneath the cabin and packs together well for a solid, long-lasting pad. **This is the pad we recommend using.** Base preparation is entirely up to the customer and Wood-Tex cannot take any responsibility for damage caused by unlevel or inadequate pads.

We DO NOT recommend placing our cabins on blocks. Blocks settle unevenly and do not carry the weight properly.

Preparation for cabins with full utility hookup

To supply a cabin with full utilities requires three separate hookups, water supply, waste water and electrical feed. When hooking a cabin up to utilities, standard site preparation and hookup is as follows:

- 1) Install a base of #2 crushed stone 4" - 6" leveled and tamped.
- 2) Be sure the base is a couple feet larger than the actual cabin to allow for proper drainage around cabin.
- 3) Dig a hole 4' deep, 6' long and 3' wide at the location on the site where the hookups will be run. This trench shall be dug in such a way that when the cabin is delivered half of the trench will travel underneath the cabin and the other half of the trench will extend out the side of the cabin. All hookups are accessible from the bottom of the cabin so this allows your contractor access to make the necessary hookups from within this trench. After the hookup is made this trench can then be filled in.

**Always ask your Wood-Tex sales rep to confirm the standard hookup is applicable to your cabin.

Spend your
weekends enjoying
all the activities you
love, made possible
with your new
WoodTex
Log Cabin.
