'Green Value Package'

Highly Economical ...

Uses Environmentally Friendly Materials ...

Promotes Energy Savings ...

Great Value and Durability!!

GO GREEN WITH WOOD-TEX PRODUCTS!

Upgrade any size or style Storage Shed or Garage to the **Green Value Package** and help us reduce our carbon footprint while saving you a bundle of CASH!

Wood-Tex Products is committed to manufacturing only the finest, most durable and user friendly structures available. We are committed to building with only the most ecological, earth-friendly materials while still maintaining our high quality standards and the longevity you have come to expect.

The **Green Value Package** uses only the most efficient and environmentally friendly raw materials. It incorporates cutting edge technology, time tested products and an aggressive dedication to preserving our natural, renewable resources.

THE MATERIALS:

LP Smartside Siding is a very durable, consistent and long lasting siding with great curb appeal! The vertical grooves every 8" along with the natural wood grain give it a beautiful texture that paint adheres to very well. Coming with a limited 50 Year Warranty LP Smartside Siding is built on an engineered Oriented Strand Board base which gives it the integrity and consistency it is known for. Made from small, easily grown and rapidly regenerating trees, Smartside Siding is on the cutting edge of eco-awareness. *Because it uses small, oriented wood chips, manufactured together with glues, resins and borates, it is much more efficient to produce than plywood and it also naturally resists moisture, rot, mold and termites.*

3/4" Tongue & Groove Oriented Strand Board Sheeting is also used to replace the standard 5/8" Plywood floor sheeting. Here is a quick overview of the manufacturing process of OSB: Board panels consist of 95% wood and 5% resin. Engineered strips of wood are layered, glued and pressed to produce a consistent, durable product, very popular with builders and carpenters for its reputation to be easy to cut, install, fasten and endure! The high technical parameters of OSB boards result from the fact that the boards maintain a wood fiber like structure that when mixing with each other tightly, they are sprayed with special gluing resin, wax and paraffin emulsion mixtures in special gluing machines that make the boards very resistant to outside environment factors.

Pre Painted Aluminum Corner Trims are used which is faster and more economical than the standard trim which needs to be cut, built and painted. This translates into less time and materials involved in the building process which means savings in dollar amounts and energy consumption.

THE SAVINGS!!

Save **5%** on the base price of any structure by upgrading to the GREEN VALUE PACKAGE! You will help us preserve the earth while saving yourself cold, hard cash!!

GREEN VALUE PACKAGE STANDARD FEATURES:

- 4x4 Pressure Treated Skids
- 2x4 or 2x6 Floor Joists
- 3/4" Tongue & groove OSB Floor Sheeting
- 2x4 Studs, 16" On Center
- 3/8" LP Smart Panel Siding
- Aluminum Corner Trim
- 1/2" OSB Roof Sheeting
- Aluminum Drip Edge
- 30 Year Architectural Shingles
- Colonial Door Trim
